ADULT OCCUPANT

The protection offered to the driver head was Adequate due to bottoming out of the driver airbag. Driver chest protection as marginal. Passenger's head and chest protection was good. The front passengers' knees could impact with dangerous structures in the dashboard lie the Tran fascia tube. The bodyshell was rated as unstable and it was not capable of withstanding any further loadings. The car offers driver Seat Belt Reminder.

CHILD OCCUPANT

The child seat for the 3 year old child was unable to prevent excessive forward movement during the impact. The recommended CRSs did not show incompatibility. The installation instructions on both child seats were insufficient and not permanently attached to the seat. The vehicle was equipped with a passenger airbag but it could not be disabled in order to prevent high risks of injuries when installing a rearward facing CRS.
